FLUID HANDLING:

Depth Filter Elements

Wound Cellulose Depth Filter Elements are an inexpensive method for obtaining high-efficiency filtration in light-viscosity oils such as hydraulic, turbine, or transformer oils.

KEY BENEFITS:

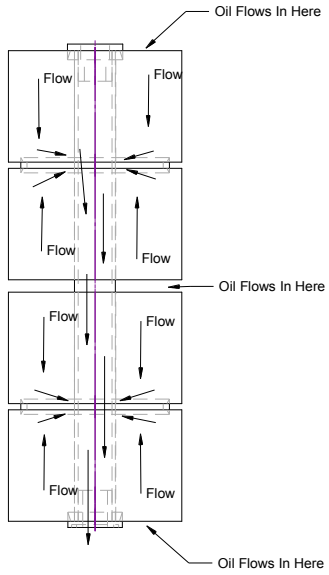
- Helps to clean the oil (not just screen the oil) by dislodging contaminants
- Achieves particle removal below 1 micron

DES-CASE®

THE SPECS

The Depth Filters:
The Standard Features

- Axial flow between the layers of the media
- High dirt holding capacity
- Can maintain moisture to levels below 50ppm



Specifications

Media	Wound Cellulose
Endcap Seals	Positive, deep penetrating seal to prevent oil from bypassing media 33% glass filled / Nylon 6/6
Gaskets and O-Rings	Buna-N standard; Viton® optional
Holds up to 10lbs of dirt per element	
Adsorbs up to 1 gallon of water per element	

Interchangeable with all industry standard size depth media filter elements. Call Des-Case at (615) 672-8800 for a cross reference.

NOTE: The size references the number of cubic inches of filter media contained in the element. For example, a size 1000 filter has 1,000 cubic inches of filter media.

*Maximum recommended viscosity of 460

CAUTION Depth filter media should not be used for water removal purposes. Call Des-Case at (615) 672-8800 for more information or assistance in selecting the appropriate filter media for your application.
