FLUID HANDLING:

Depth Filter Elements

Wound Cellulose Depth Filter Elements are an inexpensive method for obtaining high-efficiency filtration in light-viscosity oils such as hydraulic, turbine, or transformer oils.

KEY BENEFITS:

• Helps to clean the oil (not just screen the oil) by dislodging contaminants

• Achieves particle removal below 1 micron
THE SPECS

The Depth Filters:
The Standard Features

- Axial flow between the layers of the media
- High dirt holding capacity
- Can maintain moisture to levels below 50ppm

Specifications

</table>

NOTE: The size references the number of cubic inches of filter media contained in the element. For example, a size 1000 filter has 1,000 cubic inches of filter media.
*Maximum recommended viscosity of 460

CAUTION

Depth filter media should not be used for water removal purposes. Call Des-Case at (615) 672-8800 for more information or assistance in selecting the appropriate filter media for your application.
